

Supplementary Table S5. X-NDJ in *nos>wcd-RFP* females

A. Sex chromosome NDJ :

Progeny:	Regular		Exceptional			
Maternal genotype	XX	XY	XXY	X0	Nc	% NDJ
<i>WT</i>	252	186	1	0	440	0.5
<i>nos>wcdRFP/+</i>	212	204	0	1	418	0.5
<i>nos>UAS-GFP</i>	234	237	0	0	471	0

Indicated females were crossed to *w/BsYy+* males. Surviving exceptional aneuploids are Bar-eyed *y/y/B^sY* females and wild-type *yw/0* males

Percentage of X-NDJ: $100 \times 2(X\text{-NDJ progeny}) / \text{total progeny}$, where total progeny (Nc) was calculated as $2(X\text{-NDJ progeny}) + \text{regular progeny}$ (Gyuricza et al 2016).
