

Figure S3. Day sleep in The Sleep Inbred Panel. Mean night sleep \pm SE is plotted for each line of the SIP as compared to the mean of its corresponding progenitor population. SIP lines are ordered from the shortest-sleeping line to the longest. Solid colors indicate SIP line; diagonal bars indicate the mean of the progenitor population as reported in Harbison *et al.*, (*PLoS Genetics*, 2017). (A-D) Night sleep in SIP lines derived from the (A) L1 population; (B) L2 population; (C) S1 population; and (D) S2 population.
