
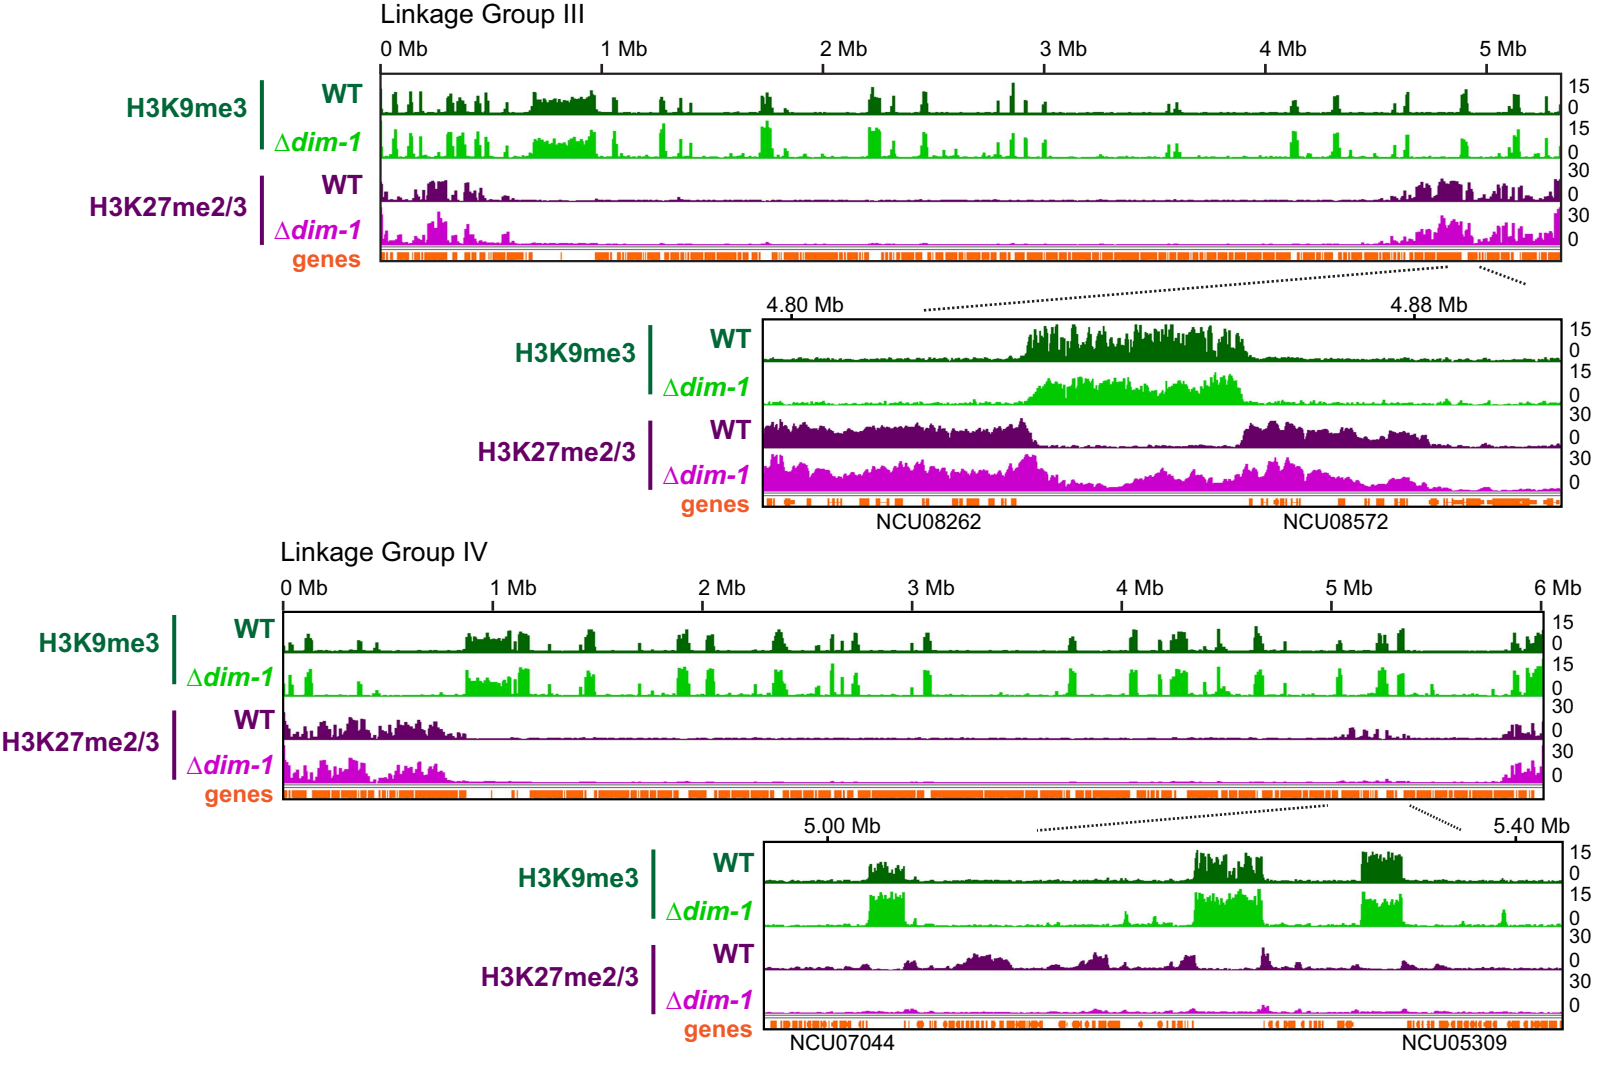

Figure S11. Facultative heterochromatin marked by H3K27me2/3 is largely unaffected in* Δdim-1 *strains. A. ChIP-seq tracks of H3K9me3 (green) and H3K27me2/3 (purple) on two chromosomes (LG III and LG IV) from WT and Δ*dim-1* strains. H3K27me2/3 peaks are minimally changed overall, but zoomed regions show small areas that exhibit slight changes.
