

Figure S8. Transcription profile of the *P. megakarya* (Pm1) and *P. palmivora* (Pp2) RxLRs detected *in planta*. For the relative transcription profiles, *Pmeg* (A) and *Ppal* (B) RxLRs detected in at least three of the four biological replicates (with ≥ 1 paired read) of 36hpi *in planta* samples were normalized and Log₁₀ transformed. The heat map was generated using CIMminer
