

Figure S4: Pairwise phenotypic Euclidian distances plotted against pairwise Euclidian genetic distances for all available traits. Genetic Euclidian distances were calculated based on the 100 most significantly associated SNP markers to the trait as given by the GWAS.

Pairwise phenotypic Euclidian distances plotted against pairwise Euclidian genetic distances for all available traits (one page for each trait). Genetic Euclidian distances were calculated based on the 100 most significantly associated SNP markers to the trait as given by the GWAS (Genome-Wide-Association-Study). A full description of the traits is available in File S1.

ADF\_04\_me17

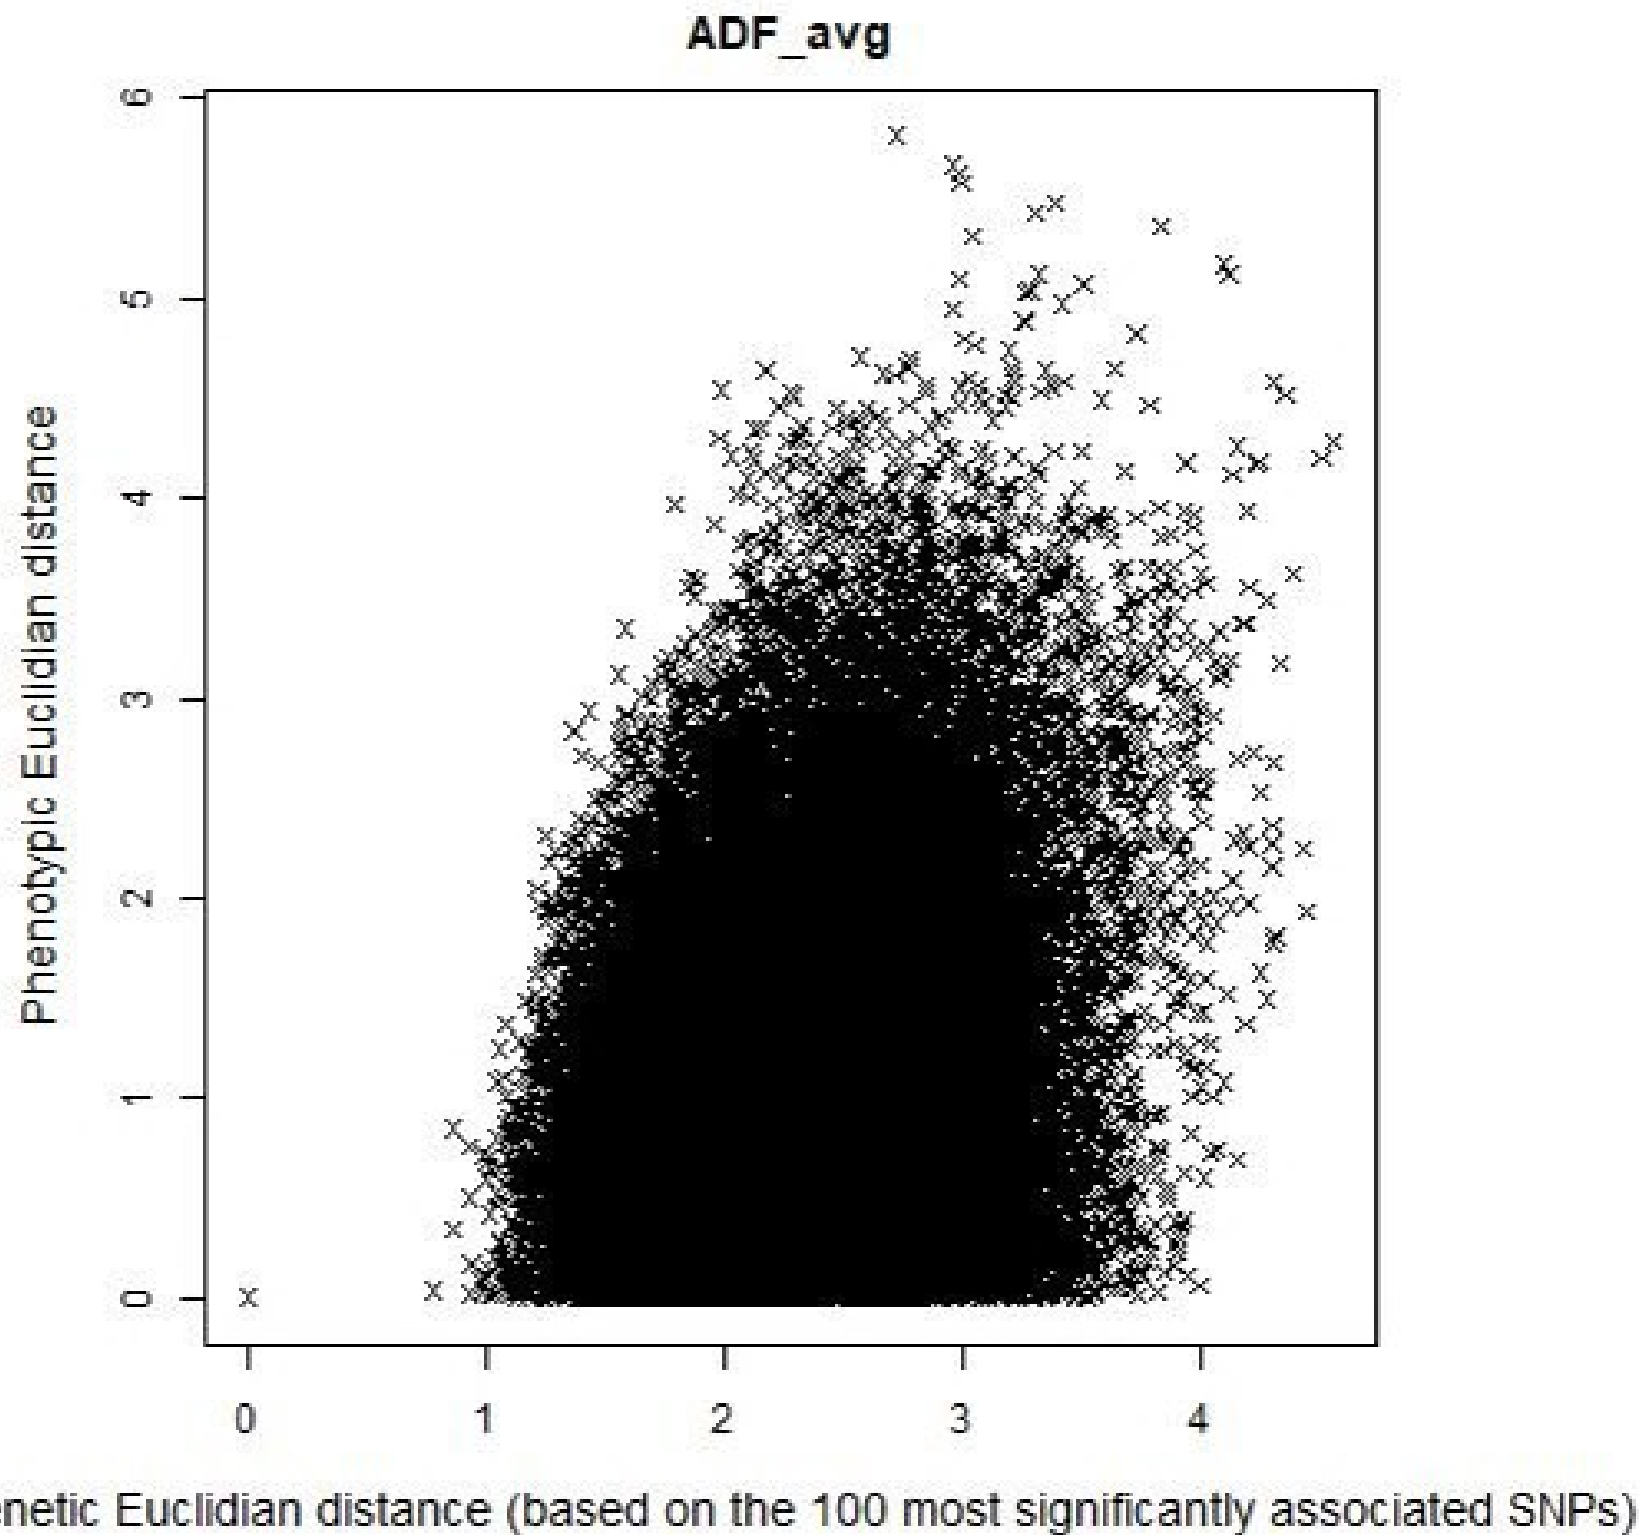

Genetic Euclidian distance (based on the 100 most significantly associated SNPs)

ADF\_10\_me17

Genetic Euclidian distance (based on the 100 most significantly associated SNPs)

ADL\_04\_me17

Genetic Euclidian distance (based on the 100 most significantly associated SNPs)

ADL\_10\_me17
