

Figure S1

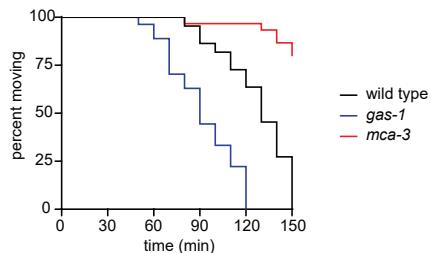

Figure S1: Use of either the swim-based or plate-based levamisole assay results in the same phenotype

Sensitivity to 0.5 mM levamisole in a plate-based assay performed as described (Krajacic *et al.* 2013). The *gas-1(fc21)* mutant exhibited hypersensitivity while the *mca-3(ar492)* mutant showed resistance compared to the wild type. This is consistent with data in Figures 2A and 4F, which were collected with the swim-based assay. Thus, these two different levamisole assays produced the same results for mutants that were already known to have a levamisole phenotype (Figure 1A; Lewis *et al.* 1980; Krajacic *et al.* 2013) and loss of genes that were identified in our screen.

Figure S2

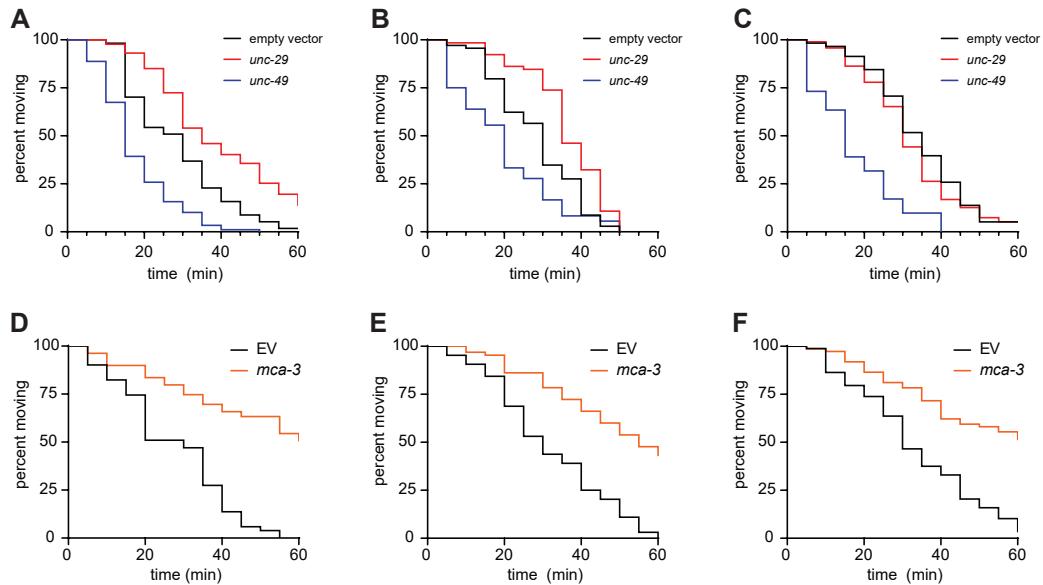

Figure S2: The *unc-29* RNAi clone caused inefficient knockdown, while the *unc-49* and *mca-3* clones produced consistent results

unc-29 mutations cause nearly complete resistance in both plate-based levamisole assays (Lewis *et al.* 1980; Krajacic *et al.* 2013) and our swim-based levamisole assay (this work, Figure 1A). Yet in three separate time course assays, knockdown of *unc-29* (red) caused (A) significant resistance ($p < 0.001$), but far weaker than the mutant (Figure 1A), (B) weak resistance ($p < 0.01$) that would not have been identified in the RNAi screen due to similarity to empty vector (black) at 40 minutes, and (C) no significant difference compared to the empty vector ($p=0.34$). (D-F) Knockdown of *mca-3* (orange) resulted in delayed paralysis in all assays, indicating that levamisole resistance can be scored reproducibly with this swim-based assay. Thus, it is likely that inefficient knockdown prevented us from identifying *unc-29* in our screen. We note that knockdown of *unc-49* (blue) in (A-C) caused significant hypersensitivity in all three assays ($p < 0.001$), consistent with the *unc-49* mutant phenotype (Krajacic *et al.* 2013 and this work, Figure 1A). However, we did not identify *unc-49* in our screen, suggesting that the two point screening method likely missed some knockdowns that cause robust levamisole hypersensitivity.

Supplemental Table 1: Genes identified in the RNAi screen for altered sensitivity to levamisole.

Knockdown of the genes shown in red caused levamisole resistance; knockdown of genes in black resulted in hypersensitivity.

		# times / 6	<u>muscle expression</u>	<u>lethal</u>	<u>known lev. phenotype</u>	<u>Description</u>	<u>Ref for muscle expressed</u>	<u>Ref for lev phenotype</u>
Acetylcholine receptor and clustering								
Y110A7A.3	<i>unc-63</i>	6	yes		resistant	Acetylcholine receptor, nicotinic	Culetto et al, 2004	Culetto et al, 2004
