
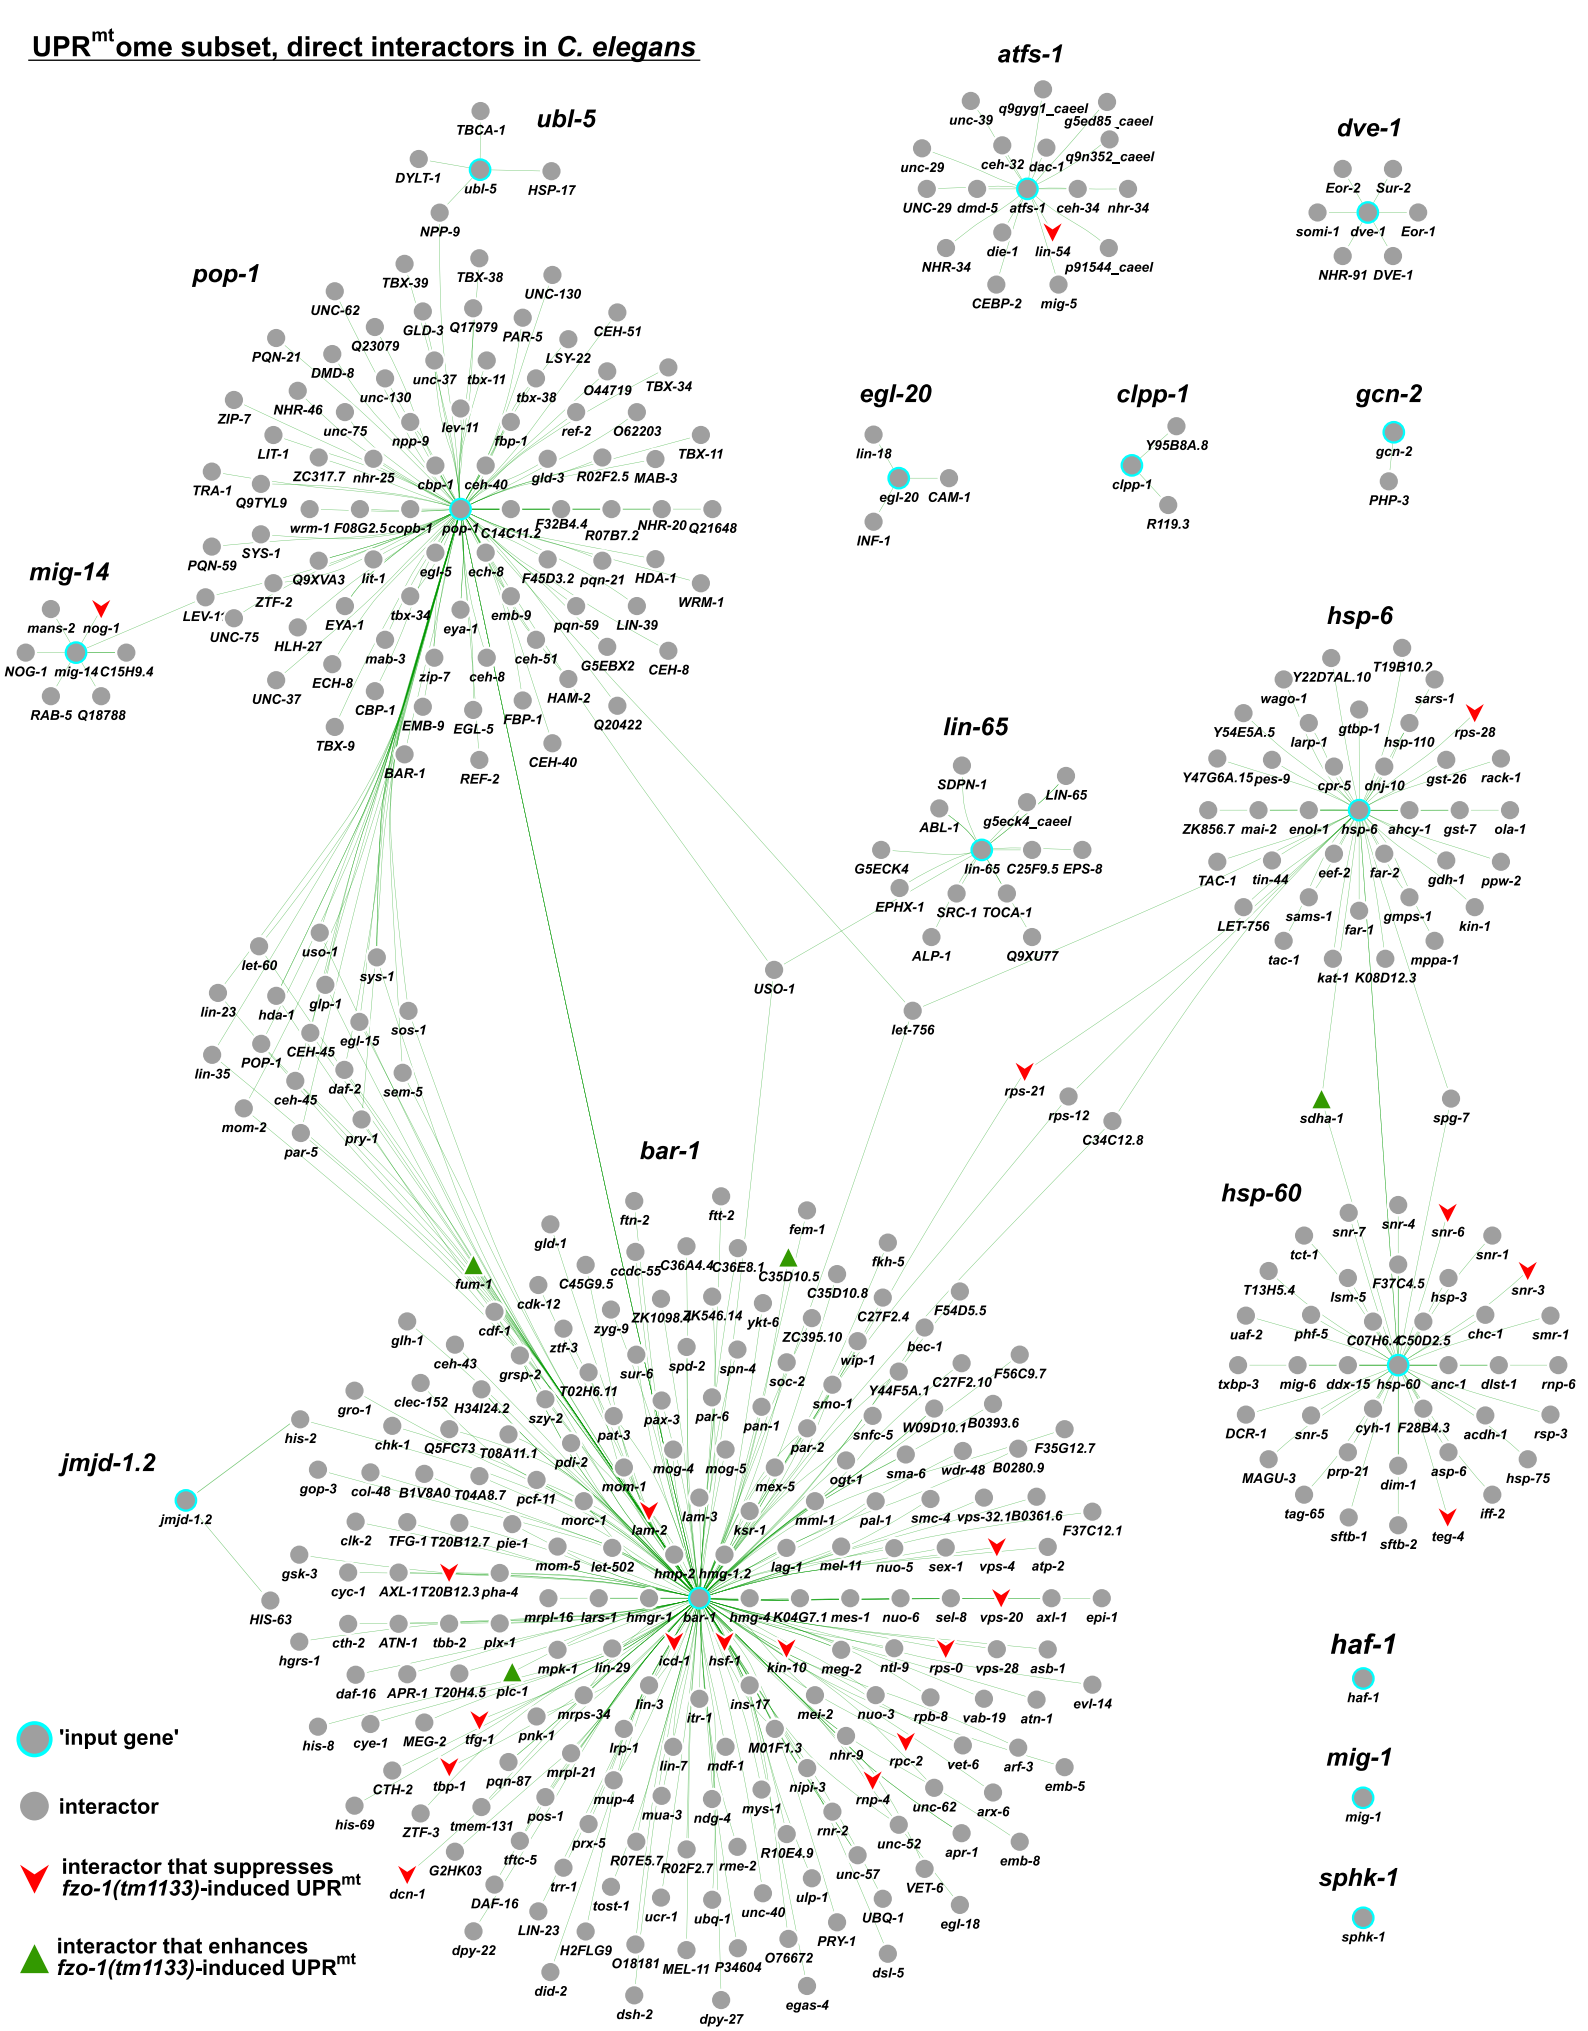

Figure S4: Subset of the UPR^{mt}ome, direct interactors in *C. elegans*. 'Input genes' associated with the GO-term 'mitochondrial unfolded protein' are indicated with turquois circles and their interactors in *C. elegans* are indicated with grey dots. Red arrowheads: suppressors of *fzo-1(tm1133)*-induced UPR^{mt} that overlap with the UPR^{mt}ome subset; Green triangles: enhancers of *fzo-1(tm1133)*-induced UPR^{mt} that overlap with the UPR^{mt}ome subset.
